Normalization

Put data in context & allow comparisons

Normalized Citation Impact Percentile Indicators ESI Highly Cited Papers

Clarivate[™]

The use of H-Index in Researcher Evaluation

In this example an h-index = 23 for a researcher who is an author or coauthor on 44 citable journal articles over a 15-year period.

Output included reports and proceedings that cannot be analysed in this way. Graphing the data reveals the spread, skew, and presence of relatively highly-cited items buried under the 'h' value. Uncited items disappear.

Comparing 2 Researchers

Using Normalized Indicators

	Total Publications	Total Citations	H-Index	CNCI	JNCI
Researcher A	66	290	9	1.32	1.86
Researcher B	62	289	9	0.45	0.72

Both researchers have similar number of publications, citations, H-index.

They may be conducting research in different fields and may have different history of publication.

Using normalized indicators like Category Normalized Citation Impact (CNCI) and Journal Normalized Citation Impact (JNCI) gives us a better understanding of their performance relative to their peers in terms of subject, document type and age of publication.

Percentile Calculation

Each document is compared to their YEAR, CATEGORY (research field) and document type.

Using this comparison, they are each given a set of normalised metrics.

This figure is from a white paper ISI produced recently, which can be downloaded <u>here</u>.

Additional information on how we use normalized indictors can be found <u>here</u>.

Clarivate

This example is for publications in 2015, in the research field of Organic Chemistry.

Articles in organic chemistry 2015

The highest number of citations received by a publication was 462, lowest 0. The figure demonstrates how skewed the distribution is and how useful a percentile is.

Author Record Beamplot

A beamplot is a type of graph that plots an author's publications citation percentile values on a 'beam'.

They were proposed by <u>Lutz Bornmann and Robin</u> <u>Haunschild</u> of the Max Planck Institute and were supported by the Institute for Scientific Information (ISI) in the <u>Profiles, not Metrics</u> (2018) report, as an alternative indicator to the H-index, as a measure of a researcher's citation profile.

We have now introduced them into Author Records in the Web of Science.

They allow you to:

- ✓ View article performance in appropriate context
- ✓ See performance change over time

In Web of Science, a higher percentile value means better performance. A paper with a percentile of value of 99, is in the top 1% of 'like' publications. Each purple node represents an article or group of articles. Its position shows its year of publication (y-axis) and its citation percentile (x-axis).

PUBLICATIONS AUTHOR IMPACT BEAMPLOT

Author Record Beamplot

Clarivate[™]

Larger nodes indicte more than one paper occupies the same location in the beamplot.

Author Record Beamplot

THINGS TO KNOW

- Percentile values are sourced from *InCites Benchmarking & Analytics* (including ESCI data).
- Beamplots only include publications with the Web of Science document type, Article or Review.
- Percentiles are calculated for publications <u>back to 1980</u>.
 Current and previous year publications are excluded from the beamplot (due to low number of citations).
- Publications may be assigned more than one subject category. The category displayed is the highest performing.

Importance of showcasing your research

- Get noticed by potential collaborators
- Enhance the reputation of yourself, your department and your institution
- Demonstrate the breadth of your research to:
 - Hiring committees
 - Funding agencies
 - Tenure evaluators
- Identify researchers for mentorship or collaboration

Clarivate[®]

and not mixed up with someone else

What is Author disambiguation?

Name ambiguity is a frequently encountered problem in the scholarly community:

- Different researchers publish under the same name.
- Individual researchers publish under many names.
- Languages and cultural naming conventions introduce additional challenges.

Clarivate[™]

Also published as:

- Avram Noam
- Chomsky
- N. Chomsky
- نعوم تشومسکي •
- נועם חומסקי

FACT: A mere hundred surnames still make up over 85% of China's 1.3 billion citizens. The top three—Wang, Li , and Zhang—cover more than 20% of the population.

> Author disambiguation is a process that aims to find all publications that belong to a given author and distinguish them from publications of other authors who share the same name.

What drives the need for author profiling systems?

wrestling with ambiguous author data in systems.

Bringing it all together

A unique experience for unique author identifiers.

Web of Science / Publons has a unique Identifying number.

Web of Science ResearcherID links the disambiguated data across systems in a bidirectional relationship.

Creating a Publons profile will generate a Web of Science ResearcherID.

Authors can adjust which Web of Science publications are theirs in Publons and those changes are automatically reflected in Web of Science.

An easier way to

Clarivate[®]

No Publons Profile?

There are two easy routes to setting up your own Publons Profile:-

- By Claiming your unclaimed Web of Science Author Record (or a combination of several Author Records).
- By creating one from the publons.com site.

Profile complete – now showcase your work with Publons CV

Individual Evaluations.

Visas to work abroad as an Outstanding Researcher.

Promotion, job, funding and grant applications.

Continuing Education.

Andrew Harrison

Demo: Claiming your Author Record

Accelerate your research and advance your career

Publish findings

Web of Science

Quickly find relevant papers from the world's leading sources, to inform your research.

EndNote Click (formerly Kopernio) Instantly access the full text PDFs.

Publons/Author Records Check for possible experts to collaborate with.

EndNote

Save time authoring your manuscript with a tool that creates your bibliography for you.

Journal Citation Reports

Easily identify leading journals to publish in, that can maximize your reach and influence. Publons/Author Records Showcase the full picture of your scholarly contributions in a multidimensional public profile that records your papers, citations, collaboration network, peer reviews, and editorial activity in one place.

Web of Science

Submit more competitive funding applications using objective, verifiable statistics for your research.

Publons CV

Save time preparing your P&T dossier and grant applications using an automated CV generator.
